

ArcTime

A smart time tracking tool to make every minute productive

Time & Attendance

Automated time & attendance tracking functionality to match the work life of a diverse workforce—desktop time clock for the in-office workforce and mobile time clocks for in-field workers. Set thresholds for breaks and configure rule-based exceptions for maximum flexibility and easy management.

Automated Timesheet

Figure out who's worked on what, which project they worked on, how long they worked on it, and billable and non-billable hours. The system automatically rounds off the clock-in/clock-out times to the nearest increment to ensure accurate invoicing and payroll data, and to discourage early clock-ins.

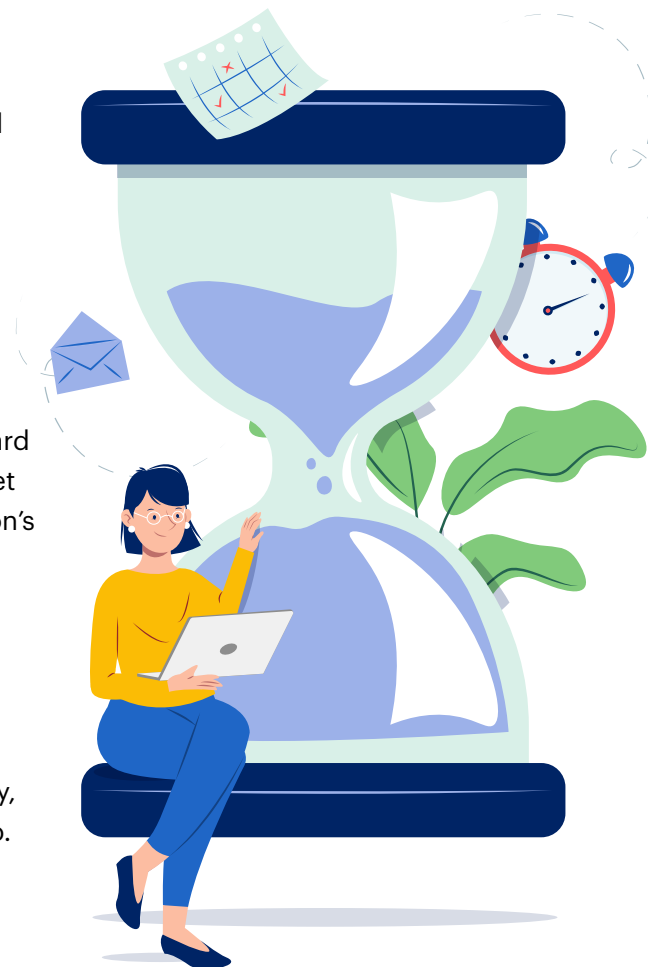

Time Off & Absence Tracking

Configure various time off policies and use the dashboard to approve/deny time off requests with a single click. Set the rules for accrued time off based on your organization's unique policies and automate them. Complex leave situations are handled with ease!

Employee Scheduling

Build schedules for employees or teams to match the business priorities. Have managers draw up daily, weekly, or monthly schedules and allocate employees on-the-go. You can even automate the scheduling by defining the schedule variables and employee preferences.
